** Must be running Server 2012, have 2.5X free space and be under a mfg. warranty for the 1 year term.

3 TB plans are subject to overage charges

Understanding Backup & Recovery Solutions

Complete Protection with an Automated System

Most businesses collect, retain, and transmit data on a daily basis that is critical to the success of their organization. The threat of data theft, natural disasters and hardware failures can result in a hard hit to a business' bottom line, costing days of downtime, thousands of dollars and irreversible damage to a business' reputation.

What's Covered and Prevented?

Files and Folders

Recover from the accidental deletion of any document, spreadsheet, or folder.

Protect Against Closure

43% of companies that experience disasters never re-open, 29% close within two years.

Exchange, SQL and System State

Enable backup and recovery of Exchange, SQL data, and System State.

Protect Revenue

The average recovery costs resulting from a single data loss incident is \$10,000.

Virtual Images

Restore full VM images from the cloud back to your host or our site.

Protect Against Outages

SMBs experience an average of six outages per calendar year.

Reliable, Highly Secure and Scalable

Manage Local and Offsite Backups

Our flexible solution allows for any of your data to be stored online and/or saved to local storage, eliminating the need for a separate local-only backup solution.

Military-grade Encryption

Files are secured using 256-bit AES encryption and a private encryption key. SSL technology is used in data transmission. Your data is protected both onsite and over the Internet.

Multiple Device Support

Our solutions let you back up a single computer, server, multiple computers, laptops or even multiple offices.
